Given an $m \times n$ picture consisting of black 'B' and white 'W' pixels, return the number of **black lonely pixels**.

A black lonely pixel is a character 'B' that located at a specific position where the same row and same column don't have **any other** black pixels.

Example 1:

W	W	B
W	B	W
B	W	W

Input: picture = [["W","W","B"],["W","B","W"],["B","W","W"]]
Output: 3
Explanation: All the three 'B's are black lonely pixels.

Example 2:

B	B	B
B	B	W
B	B	B

Input: picture = [["B","B","B"],["B","B","W"],["B","B","B"]]
Output: 0

Constraints:

- $m == \text{picture.length}$
- $n == \text{picture}[i].\text{length}$
- $1 \leq m, n \leq 500$
- $\text{picture}[i][j]$ is 'W' or 'B'.
